

UI/UX REVAMP STRATEGY

Designing for the shortest path to target: a field-sales order-taking experience

Strategy discussion document
| IntelliMark AI |

Youtube Video Walkthrough
[Youtube Video Walkthrough](#)

Field-sales tools fall short when they borrow consumer-app patterns; the rep's job is fundamentally different

	Consumer app	Field-sales order app
Primary goal	Discovery and delight	Hit target in the least time
User	Occasional, browsing	Power user, 15–60 calls a day
Content	Imagery and rich cards	Dense lists, numbers first
Navigation	Explore and search	Recommended path, ≤2 clicks
Success metric	Conversion, basket feel	Lines per call, strike rate, time in store

Implication: design the screen around the rep's target and time, then layer in the retailer conversation

15–60

outlets a rep covers per day in general trade

<30 sec

target to punch a typical 7–8 line order

≤2 clicks

to reach any SKU the retailer asks for

Three outcomes anchor every design decision, and six principles translate them into the interface

Business targets met

Must-sell, cross-sell and focus SKUs land in every order

Rep earns incentive

Target vs achievement is visible on every visit

Shortest time in store

Order punched in seconds, more calls per day

DESIGN PRINCIPLES

Recommend before search

Open on a prioritised list with SOQ, not an empty catalogue

Show money, not maths

Net rate after scheme is computed and shown on the line

Density over decoration

Text-first rows, no hero images on the main path

Two clicks to anything

Lenses, brand chips and search reach any SKU fast

Progressive disclosure

Slabs, visuals and pitch points sit one tap deep

Configurable, not hard-coded

KPIs, lenses and chips adapt to each client

The revamped order screen fits the full sales conversation into one scrollable view

1 Retailer and visit

Outlet name with 'Visit 3 of 4 · Monthly cycle' badge

2 Three live KPIs

Target vs achievement, lines cut, priority strike

3 Search + Accept SOQ

Type a few letters, or pre-fill the whole order in one tap

4 Three lenses

Priority (default), All, Schemes, with counts

5 Brand chips

One-tap filter by brand, or by category for large portfolios

6 Must-sell focus lines

Core-target SKUs at the top of the list

7 Deal tag and net rate

Net price after scheme, PTR struck through, MRP

8 Stepper + unit toggle

+/- on the suggested quantity, pieces or cases

9 Cross lines

Basket builders: new lines to introduce

10 Scheme strip

e.g. '10 + 1 Free' with net rate; tap for slab details

A persistent header grounds every visit: who the retailer is, where the cycle stands and three live KPIs

Target vs achievement

Value sold to this retailer against its target this cycle (₹1.6k of ₹6.0k), with a progress bar

Lines cut

Unique SKUs ordered against the assortment target (7 of 10): drives width of range

Priority strike

Focus SKUs or new launches converted (3 of 4): drives the brand agenda

Design nuances

- **Context before content.** Retailer name and visit count orient the rep in under a second.
- **Colour carries status.** Achieved values in green, targets in white; no labels needed to read progress.
- **Scoreboard vs workspace.** A dark band separates 'how am I doing' from the light order area below.
- **Three, not ten.** KPIs are capped at three to avoid overload; names and metrics are configured per client.

'Accept SOQ' turns order-taking from building a basket into editing a recommendation

The interface includes a search bar labeled 'Search SKU...' and an 'Accept SOQ' button with a lightning bolt icon. Below the search bar are filter buttons: '★ Priority (14)', 'All (40)', 'Schemes (3)', 'All Brands (40)', 'DentaPro (7)', 'GumProtect (6)', and 'DailyFres'. A quantity selector shows a minus sign, the number '4', a plus sign, and a 'PC' button. A note below the interface states: 'Suggested quantity pre-filled; +/- to edit, PC/case toggle'.

Why it matters

- **Fewer taps per line.** The rep confirms and adjusts instead of keying every quantity.
- **Right depth, not just right range.** SOQ reflects each retailer's own buying history.
- **Search stays light.** A few letters of SKU or brand returns a short list; no long forms.
- **Units match the retailer's language.** Each line toggles between pieces and cases.

The list is ordered by commercial priority, so the top of the screen is always the highest-value conversation

1 Must-sell focus lines
Core targets: SKUs already selling, with SOQ

2 Cross lines
Basket builders: new lines to introduce

3 Long tail
New launches, focus packs, special packages

4 Fulfilled this month
Already billed: kept at the bottom for depth refills

Selling width first, depth on demand

Top of list

Bottom of list

Trade schemes are resolved by the system and shown as one net rate, not a slab table the rep has to explain

Visual cues

- Yellow DEAL badge and row tint flag promoted lines
- Net rate in green, PTR struck through: the saving is visible without maths
- Scheme strip ('10 + 1 Free') sits above the SKU, with 'Net ₹ →' to drill down

How slab selection works (illustrative)

- 1 Scheme set-up**
Pack runs a multi-slab scheme, e.g. one slab for 5–50 packs
- 2 Retailer history**
This outlet has consistently bought 7–8 packs
- 3 System decision**
Applies the slab the retailer will realistically reach
- 4 What the rep sees**
One net rate on the line; full slabs one tap away

Any SKU the retailer asks for is at most two clicks away, through lenses, brand chips or search

Three routes to any SKU

- 1 Lens**
 Priority, All or Schemes; counts show scope before the tap
- 2 Brand chip**
 Filters to one brand; becomes category chips for large portfolios
- 3 Search**
 A few letters of SKU or brand as the final fallback

90%+

recall of the priority list for most clients, so long-tail search is the exception

Brand chip filter

All lens: full catalogue

Schemes lens

A one-tap product sheet equips the rep to pitch, then returns them straight to quick punching

1 Price stack

PTR, net effective rate and MRP in one line for margin talk

2 Product visual

High-resolution image for retailers who want to see the pack

3 Active trade incentive

e.g. 'Buy 2 cases, get 1 pc free', in the green used for savings

4 Retailer pitch points

Benefit-led talking points, such as segment or health claim

5 Back to Quick Punching

One clear exit back to the order; wording reinforces speed

Progressive disclosure: depth is available on demand, never on the main ordering path

Small interaction details save seconds on every line, and seconds compound across 50+ calls a day

Sticky order summary

Lines: 7/40 • Units: 12

₹1,601.00

PC

Detail	What it does	Why it matters
Sticky summary bar	Lines 7/40 · Units 12 · ₹1,601 with Submit	Rep tracks basket and lines live, without opening a cart
+/- stepper	Adjusts the pre-filled SOQ without a keyboard	Fast one-handed use while talking to the retailer
PC / case toggle	Switches unit per line	Matches how each retailer thinks about pack size
‘Billed (Visit 2): 3 pcs on 11-Sep’	Purchase history inline on fulfilled lines	Avoids over-stocking; supports a refill pitch
Counts on lenses and chips	Priority (14), All (40), DentaPro (7)	Sets expectations before the tap
‘Clear’ chip	Resets filters in one tap	No dead ends when a filter returns nothing

MEASURING IMPACT

Success should be measured on rep productivity and commercial outcomes, with baselines set in the pilot

DESIGN TARGETS

<30 sec

to punch a 7–8 line order

≤2 clicks

to any SKU outside the priority list

80%+

of ordered lines already on the priority list

Outcome metric	Definition	What it tells us	Target
Lines per call	Unique SKUs per order	Width of assortment	5-6 per visit, 20-25 per month
Priority strike rate	Focus SKUs converted / recommended	Brand agenda delivery	40%+
SOQ acceptance rate	Lines kept at suggested quantity	Trust in recommendations	50%+
Time in store	Check-in to order submit	Calls per day	< 4 Mins
